# PREFACE

In an era marked by technological revolutions, the concept of Industry 5.0 stands at the forefront, promising a paradigm shift in the way industries operate. As we navigate the ever-evolving landscape unravel the intricacies and possibilities that Industry 5.0 holds. “Navigating the Future” invites all attendees to be active contributors to the ongoing dialogue that shapes the future on industries, fostering a community of forward – thinkers and innovators who are well – equipped to drive positive change in the world of Industry 5.0

Industry 5.0 is regarded as a fifth industrial revolution in which consumers could satisfy their individual requirements as per the tastes and expectations. Although the repetitive tasks are done by robots in Industry 4.0 which is at the mass customization level, Industry 5.0 aims to perform mass personalization with help of Artificial Intelligence.

Industry 5.0 is expected to revolutionize the production process with higher autonomy to collaborative robots. Industry 5.0 is the futuristic industrial revolution which is expected to bring in more creativity and innovation in the products by allowing robots to perform repetitive tasks. It is expected to utilize the creative intellectual capability of human optimally. Moving from mass production to custom manufacturing techniques and production system digitization and intelligentization.

In the lines if above, the PG & Research Department of Commerce has organized two days Conference on the theme “Navigating the Future: Unveiling the Dynamics of Industry 5.0” with the following objectives, to understand and gain knowledge on the functional areas of Industry 5.0; to provide a holistic understanding of the multifaceted dynamics of Industry 5.0 and to enhance the research aptitude among the academicians, scholars towards dynamic changing environment.

To get more insights on the above theme, research articles were invited for presentation and publication. The Department has received fifty (50) articles on various sub-themes from Professors and research scholars of various colleges in Tamil Nadu, Kerala and Karnataka. The Editorial Board has reviewed and edited all the papers scrupulously and meticulously with plagiarism check.

The Editorial Board has recommended and forwarded all the articles in the form of Edited Book with ISBN Publication Number for disseminating the knowledge to all the stakeholders of Higher Education Institutions and Industry concerned.

This book is a comprehensive guide for understanding and utilizing on various themes to generate indepth knowledge on it and suitable for research scholars as well as corporates. We hope that you will find this book informative and inquisitive as much as we learnt it.

Editorial Board.

## CONTENTS

S.No	Title	Page No.
1	UNLOCKING INNOVATION IN MSMES THROUGH TECHNOLOGY ADOPTION <b>S. Natanagopal &amp; Dr.A. Mayil Murugan</b>	1
2	FARMER PRODUCERS ORGANISATION - A NEW ERA OF INCLUSIVE GROWTH <b>Ms.P. Gajalakshmi &amp; Dr. A. Mayilmurugan</b>	12
3	ROLE OF GREEN MARKETING IN SKILL DEVELOPMENT <b>V.Preethi &amp; Dr. M. Chandrasekaran</b>	21
4	APPLYING KAIZEN AND LEAN PRINCIPLES TO MARKETING: A CONCEPTUAL FRAMEWORK <b>Dr. S. Selvakumar &amp; A.Suguna</b>	31
5	A STUDY ON IMPLEMENTATION AND UPGRADATION OF STRATEGIC COST MANAGEMENT FOR INDUSTRY 5.0 <b>J. Kenmai Selvam</b>	37
6	IMPLICATION OF ARTIFICIAL INTELLIGENCE IN BANKING SECTOR <b>Dr. K. Hemamalini &amp; P.Sindhu</b>	42
7	ROBO-ADVISORY SERVICES IN MSMES <b>Roopa D &amp; Dr Chaya R</b>	48
8	DIGITAL MARKETING TRANSFORMATION IN THE DIGITAL PAYMENT INDUSTRY <b>Ms.M.Anitha &amp; Dr.S.Chandrasekar</b>	57
9	A STUDY ON EFFECT OF INDUSTRY 5.0 IN STUDENTS – CHALLENGES AND SOLUTIONS <b>Dr.D.Samundeeswari &amp; Yughandra</b>	63
10	A STUDY ON FOREIGN DIRECT INVESTMENT INFLOWS IN DEVELOPMENT OF ENTERPRISES AND SERVICES HUB (DESH) IN TAMILNADU WITH AN UNVEILING THE DYNAMICS OF INDUSTRY 5.0 <b>S.Lakshmi Bharathi &amp; Dr. R.Vennila</b>	68
11	INSURTECH IN INDUSTRY 5.0 <b>V.Nithya &amp; Dr.A.Karuppusamy</b>	81
12	HUMAN RESOURCES ANALYTICS <b>Mr. S.Jeevananthan &amp; Mr.M. Aravind</b>	84
13	UNVEILING THE IMPACT OF INDUSTRY 5.0 TECHNOLOGIES ON CONSUMER CHOICES IN THE ORGANIC FOOD SECTOR <b>J. ArunPriya &amp; Dr A. MayilMurugan</b>	92

14	ECO-EMPOWERMENT: SUSTAINABLE STRATEGIES FOR FMCG SUCCESS IN THE GREEN MARKET <b>A.T.LogaRubini &amp; Dr.K.Hema Malini</b>	96
15	A STUDY ON REVOLUTION OF INDUSTRY 5.0 AND DEVELOPMENT OF FINTECH IN INDIA <b>P. Banu Priya</b>	104
16	EXPLORING THE GIG ECONOMY IN INDIA: OPPORTUNITIES AND CHALLENGES <b>Mr.S.Praveenkumar &amp; Dr.S.Chandarsekar</b>	109
17	TECHNOPRENEURSHIP IN INDUSTRY 5.0 <b>J.Gayathri &amp; Dr.A.MayilMurugan</b>	113

# **STRATEGIC COST MANAGEMENT TO NAVIGATE THE FUTURE: UNVEILING THE DYNAMICS OF INDUSTRY 5.0"**

**Bhargavi R**

*Teaching Assistant, Department of Commerce  
Shivnadar University, Chennai*

**Dr. Hema Malini**

*Assistant Professor  
PG & Research Department of Commerce  
The Madura College, Madurai*

## **Abstract:**

*This Research Paper explores the vital role that strategic cost management plays in negotiating Industry 5.0's shifting environment. For an industry to remain competitive and profitable over time, it is critical to comprehend and manage costs effectively as customer expectations and technological breakthroughs drive industry changes. In light of the significant shifts in industries brought about by digitalization, automation, and interconnectivity, it is imperative that conventional cost management approaches adapt to the distinct obstacles and prospects presented by this novel period. By means of an extensive analysis of existing literature and case studies, this study clarifies the fundamental concepts and methodologies of Industry 5.0-specific strategic cost management. It looks at how market dynamics, organizational capacities, and technology developments interact to shape competitiveness and cost structures. Based on an extensive analysis of existing literature and actual data, this study clarifies the complex relationship between Industry 5.0's developing paradigm and strategic cost management approaches. It looks into how businesses may use cutting-edge technologies like blockchain, Internet of Things (IoT), and artificial intelligence (AI) to improve operational efficiency, optimize cost structures, and stimulate innovation. The study also examines the strategic implications of Industry 5.0 for cost management techniques, stressing the importance of flexibility, agility, and an innovative way of thinking. This report provides useful insights for business executives and practitioners looking to optimize their cost management strategies to achieve sustainable growth and competitive advantage while navigating the challenges of Industry 5.0 through perceptive analysis and useful recommendations.*

## **Introduction:**

### **Strategic Cost Management**

In the current business environment characterized by intense competitive pressures, organizations need to implement strategies to manage costs and reduce these costs not only on a short-term basis, but also over the long term (Nimocks, Rosiello, & Wright, 2005). Strategic cost management (SCM) is the deliberate alignment of firms' resources and associated cost structure with long-term strategy and short-term tactics (Anderson & Dekker, 2009a).

It represents one aspect of a larger stream of research devoted to strategic management accounting (i.e., Bromwich, 1990, Cadez and Guilding, 2008, Lord, 1996, Roslender and Hart, 2003). Drawing on the work of Shank and Govindarajan, 1992, Shank and Govindarajan, 1994 and Tomkins and Carr, 1996, Anderson, 2007 describes two forms of

SCM: (i) structural cost management, and (ii) executional cost management. Both have always been central to profitable firms (Anderson & Dekker, 2009b).

Strategic cost management (SCM) is defined as “deliberate decision making aimed at aligning the firm's cost structure with its strategy and optimizing the performance of the strategy” (Anderson, 2007).

The term "structural cost management" describes cost-management initiatives meant to alter the company's cost structure. It consists of goods, procedures, and organizational tools made to create a cost structure that complements strategy. In essence, it speaks about the strategic choices that usually establish the overall boundaries of the company's cost structure. The term "executional cost management" describes cost-management initiatives meant to boost a certain strategy's success.

It is predicated on widely used management accounting instruments that assess cost performance in connection with competitive benchmarking, which finds areas for improvement. In essence, it speaks about performance assessments after strategic choices.

By making production respect the limits of our planet and putting the welfare of industry workers at the center of the production process, Industry 5.0 is understood to recognize the power of industry to achieve societal goals beyond jobs and growth, to become a resilient provider of prosperity.

## **Industry 5.0**

The premise behind Industry 5.0's introduction is that Industry 4.0 prioritizes digitalization and AI-driven technologies over the original values of sustainability and social justice in order to increase production efficiency and flexibility. In order to assist the industry in its long-term service to mankind within planetary limitations, research and innovation are crucial, as highlighted by the notion of Industry 5.0, which offers a different emphasis and point of view.

In fact, there have been some talks of the "Age of Augmentation," in which humans and machines coexist and work in harmony, prior to the official launch of Industry 5.0 . Bednar and Welch also discussed "Smart Working" techniques.

Michael Rada is the one who first used the phrase "Industry 5.0". The utilization of collaborative robots, which will assist reduce risk, is one of the main components of Industry 5.0. The objectives and standards for the activities being carried out, as well as the human operator, are all visible, understandable, and felt by these robots. These robots are designed to assist human operators in carrying out tasks by observing and learning from human performance.

Industry 5.0 also involves the integration of AI into human existence with the goal of augmenting human potential. Advanced IT technologies, IoT, robotics, AI, and augmented reality are being employed in Industry 5.0 to improve and facilitate human labor.

Industry 5.0 is now understood to be a movement aimed at restoring human interaction to the production process. This is a result of the widespread desire for customization among consumers. According to this concept, customers would pay more

for Industry 5.0 items because they give them a means of expressing their inner need for self-expression .

In summary, the goal of sector 5.0 is to make the sector more resilient, human-centered, and sustainable. Industry 5.0 is seen as a complement to the Industry 4.0 paradigm by some, while others see it as an evolutionary, gradual progress that builds upon the ideas and procedures of Industry 4.0.

### **Literature Review**

Cooper and Slagmulder's 2017 book "Strategic Cost Management in the Digital Age: Challenges and Opportunities"

This essential study explores the developing landscape of cost management in the context of digitalization and gives insights into how firms may modify their cost management strategies to succeed in Industry 4.0 and beyond.

By Schröder, C., et al. (2020) "Cost Management in the Era of Industry 4.0: A Systematic Literature Review"

This thorough analysis summarizes the body of research on cost management in the context of Industry 4.0 and provides insightful information on new developments, difficulties, and best practices in strategic cost management.

Lengler, J., et al. (2019) published "Digital Transformation and Strategic Cost Management: A Review and Research Agenda."

The present study delves into the consequences of digital transformation on strategic cost management. It emphasizes that companies must reconsider their conventional cost management strategies and adopt digital technology to stimulate productivity and creativity.

"The Role of Advanced Analytics in Cost Management: A Review and Future Directions" by R. Simons (2018).

This paper looks at the growing importance of advanced analytics in cost management and discusses how businesses may use data analytics tools and methods to improve performance, decision-making, and cost transparency.

Zheng, Z., et al.'s "Blockchain Technology and Cost Management: Opportunities and Challenges" (2021)

Insights into how distributed ledger technology might enhance supply chain management, auditing, and cost tracking procedures are provided in this article, which investigates the potential of blockchain technology to transform cost management techniques.

Wang, L., et al.'s "Internet of Things (IoT) and Cost Management: Implications for Industry 5.0" (2019)

In the context of Industry 5.0, this research explores how IoT-enabled devices and sensors might improve cost visibility, asset monitoring, and operational efficiency. It also looks into the influence of IoT on cost management methods.

Chen, Y., and colleagues' "Artificial Intelligence and Strategic Cost Management: Opportunities and Challenges" (2020)

In order to better understand how AI-powered algorithms and machine learning approaches might enhance resource allocation, forecasting, and risk management, this article explores how AI may revolutionize cost management procedures.

"A Review of Applications and Benefits of Robotic Process Automation (RPA) and Cost Management" by Li, X., et al. (2019)

This paper examines how robotic process automation (RPA) may be used to cost management. It emphasizes how RPA technology can be used to automate repetitive jobs, increase process effectiveness, and lower operating expenses.

Schaltegger, S., et al. (2018) "Sustainability and Cost Management: Integrating Environmental and Social Considerations"

In order to promote long-term value creation and reduce risks, this article explores the relationship between sustainability and cost management, specifically focusing on how businesses may integrate social and environmental factors into their cost management procedures.

By S. Hansen et al., "Agile Cost Management: Adapting to Uncertainty and Change in Industry 5.0" (2021)

In order to handle uncertainty and spur innovation, this research examines the idea of agile cost management in the context of Industry 5.0. It does this by talking about how businesses should embrace flexibility, responsiveness, and iterative approaches to cost management.

### **Objectives:**

To examine the dynamics of Industry 5.0 and how they affect cost control while analyzing its disruptive technologies, features, and drivers.

To analyze conventional cost management in light of Industry 5.0's obstacles, and come up with creative ways to reduce costs and increase competitiveness.

### **Statement of the Problem:**

This might entail determining the benefits and problems brought about by Industry 5.0's changing environment, such as the rise of automation, digitalization, and interconnection, and investigating methods to maximize cost control.

### **Research Methodology:**

The research methodology used here is the secondary data. The research is done by using case studies, google scholar and articles.

### **Limitations:**

#### **Scope Limitations**

The research paper may not cover every aspect comprehensively. Certain subtopics or industries within Industry 5.0 may receive more attention than others, potentially limiting the analysis.

### **Data Availability and Quality**

Limited access to relevant data sources or inconsistencies in data quality could impact the depth and accuracy of the analysis.

### **Rapidly Evolving Landscape:**

The research paper may face challenges in keeping up with the latest developments and ensuring that findings remain relevant over time.

### **Complexity of Interdisciplinary Topics**

Balancing depth and breadth across these disciplines while maintaining coherence and relevance could pose challenges.

### **Practical Implementation Challenges**

While the research paper may offer actionable insights and recommendations, organizations may face challenges in implementing proposed strategies in practices.

### **Analysis:**

#### **Features of Industry 5.0:**

##### **Interconnectivity:**

Industry 5.0 places a strong emphasis on smooth connection and integration throughout the whole value chain, allowing for the interchange of data in real time and human, machine, and process cooperation.

##### **Cyber - Physical Systems (CPS) :**

CPS make it harder to distinguish between the real and virtual worlds by combining digital technology may be used to monitor, manage and optimize physical processes. These developments are fueled by cutting - edge technologies like 3D printing, which allow companies to meet the unique demands of each client at scale.

##### **Human - Machine Cooperation:**

This type of industry encourages tighter cooperation between people and machines by utilizing robots and artificial intelligence to enhance productivity and expand human capabilities.

#### **Drivers of Industry 5.0:**

##### **Digital Transformation:**

The proliferation of digital technologies, such as IoT, AI, big data analytics, and cloud computing, accelerates the transition towards Industry 5.0 by enabling connected, intelligent, and data-driven processes.

### **Customer-Centricity:**

Rising consumer expectations for personalized products and experiences drive the adoption of Industry 5.0 principles, prompting businesses to adopt agile, customer-centric approaches to production and service delivery.

### **Global Competition:**

Intensifying global competition and market volatility compel organizations to embrace Industry 5.0 to enhance agility, efficiency, and responsiveness to changing market demands.

### **Disruptive Technologies in Industry 5.0:**

#### **Internet of Things (IoT):**

IoT devices embedded in machines, products, and processes generate vast amounts of data, enabling real-time monitoring, predictive maintenance, and optimized resource utilization.

#### **Artificial Intelligence (AI) and Machine Learning:**

AI-powered algorithms analyze data, automate decision-making processes, and optimize operations, driving efficiency gains and cost savings across various functions.

#### **Advanced Robotics:**

Collaborative robots (cobots) and autonomous systems enhance productivity, quality, and flexibility in manufacturing and logistics, reducing labor costs and improving operational efficiency.

#### **Additive Manufacturing (3D Printing):**

Additive manufacturing enables on-demand, customizable production, reducing waste, inventory costs, and lead times associated with traditional manufacturing processes.

#### **Blockchain:**

Blockchain technology enhances transparency, traceability, and security in supply chains, reducing transaction costs, mitigating risks, and enabling new business models like decentralized marketplaces and smart contracts.

### **Evaluation of Traditional Cost management against Industry 5.0 dynamics:**

#### **Limited Cost Visibility:**

The Conventional cost management may not offer real-time insights into the dynamic and linked Industry 5.0 processes since it mainly depends on past data and conventional cost accounting techniques. Proactive decision-making and cost optimization are hampered by this restriction.

**Innovative Approach:** Adopt real-time cost monitoring and analytics by continually collecting and analyzing cost data by utilizing IoT sensors, AI, and big data analytics. As a result, businesses may find ways to save costs, maximize the use of their resources, and react to shifting market situations with knowledge and insight.

### **Rapid Technological Innovation:**

The Rapid technical improvements and disruptive innovations define Industry 5.0, posing a challenge to established cost management techniques that could find it difficult to keep up with changing business models and technological developments.

**Novel Strategy:** To find and take advantage of new technologies that produce cost efficiency and competitive benefits, cultivate an innovative and experimental culture inside the firm. Adopt agile cost management techniques that place an emphasis on adaptation, flexibility, and ongoing development as a way to respond to changes in technology.

### **Customization and Personalization:**

The Industry 5.0 challenges conventional cost management techniques designed for standardized, mass production processes by emphasizing mass customization and individualized manufacturing to fulfill specific client demands.

**Innovative Approach:** Utilize economical personalization tactics made possible by digital technologies like 3D printing, artificial intelligence (AI)-powered demand forecasting, and predictive analytics to maximize production schedules, reduce inventory expenses, and improve client satisfaction. Adopt adaptable cost structures to handle changing product configurations and production volumes without compromising productivity or profitability.

### **Complexity and Interconnectivity:**

Industry 5.0 presents intricate, networked systems with smooth interactions between many stakeholders, procedures, and technology. Inaccuracies in the capture and allocation of costs throughout these interrelated value chains may cause inefficiencies and cost distortions in traditional cost management systems.

**Innovative Approach:** Implement activity-based costing (ABC) or sophisticated cost allocation techniques that take into consideration the relationships and interdependencies within ecosystems for Industry 5.0. Employ blockchain technology to improve cost allocation procedures across dispersed supply chains in terms of transparency, traceability, and trust

### **Global Competition and Market Volatility:**

To stay competitive and adjust to shifting market circumstances, firms must improve their cost management agility, resilience, and responsiveness. These factors are making global competition and market volatility more intense.

**Novel Strategy:** To constantly optimize costs and remove waste across the product lifetime, implement dynamic cost management approaches including value engineering, target costing, and lean manufacturing concepts. Utilize risk management and supply chain visibility technologies to save costs, improve resilience to external uncertainties, and minimize interruptions to the supply chain.

Traditional cost management approaches have served organizations well in the past, they may not suffice in the dynamic and interconnected landscape of Industry 5.0.

Adopting novel strategies that leverage real-time data, emerging technologies is crucial for optimizing costs, enhancing competitiveness, and driving sustainable growth in Industry 5.0.

**Suggestions:**

**The Embrace Digital Transformation:**

To take advantage of cutting-edge technologies like blockchain, IoT, and artificial intelligence (AI) and increase efficiency and reduce costs, organizations need to embrace digital transformation efforts. Success in Industry 5.0 will depend on investments in personnel development and digital infrastructure.

**Encourage Innovation and Agility:**

To keep up with Industry 5.0's lightning-fast rate of change, it is imperative to foster an innovative and agile culture. Embracing innovation, teamwork, and ongoing enhancement can help companies remain ahead of the curve and take advantage of new possibilities.

**Invest in Talent and Skills Development:**

Given the changes in employment responsibilities and skill needs brought about by Industry 5.0, it is imperative to make investments in talent and skills development. Prioritizing training initiatives and reskilling programs can help organizations provide staff members the skills they need to thrive in the digital age.

**Work Together Across Ecosystems:**

To create synergies and spur innovation in cost management, cooperation between suppliers, partners, and customers is essential across industrial ecosystems. In Industry 5.0, firms may pool resources, exchange information, and generate value by forming strategic partnerships and alliances.

**Continuously monitor and adapt:**

Industry 5.0 is all about change and disruption. Consequently, it is imperative for firms to consistently observe market trends, technology breakthroughs, and competitive landscapes in order to modify their cost management tactics appropriately. Resilience, adaptability, and agility will be necessary to maintain competitiveness in the rapidly changing Industry 5.0 environment.

**Conclusion:**

Industry 5.0, which is defined by connectivity, cyber-physical systems, personalization, and human-machine cooperation, is a paradigm change in corporate operations and production. While these characteristics help companies reach previously unheard-of levels of productivity, efficiency, and agility, they also bring with them new difficulties and complications in cost control.

While useful in some situations, traditional cost management techniques can find it difficult to handle the demands of Industry 5.0. Organizations must reconsider their cost management policies and adopt innovative techniques in order to meet the challenges posed by limited cost visibility, complexity, fast technology innovation, personalization, and global competitiveness.

Numerous cutting-edge tactics for cost optimization and increased competitiveness in Industry 5.0 have been found by the investigation. These tactics include of putting in place sophisticated cost allocation techniques, encouraging creativity and agility, investing in talent development, and implementing real-time cost monitoring and analytics.

In conclusion, strategic cost management is imperative for organizations to navigate the future of Industry 5.0 successfully. By embracing digital transformation, fostering innovation and agility, investing in talent development, collaborating across ecosystems, and continuously monitoring and adapting to change, organizations can optimize costs, enhance competitiveness, and drive sustainable growth in the dynamic landscape of Industry 5.0. As Industry 5.0 reshapes industries and business models, proactive and forward-thinking approaches to cost management will be essential for organizations to thrive and prosper in the era of digital transformation.
